

Rigid Articulating Arm (Hard-arm) Manipulators

Rigid Articulating Arm Manipulators are ideal for the repetitive handling of heavy or off-centre loads; when rotating or inclining a load; when gripping or placing a load where there is an overhead obstruction; or where particular precision is needed when gripping, moving or positioning a load. They allow the operator full control over the load. Â Posilift sell an extensive range of Rigid Articulating (Hard Arm) Manipulators from small, light and compact models for lower weights and confined spaces, to large manipulators to carry loads weighing up to 900kg and with extended reaches of 6 metres to give a working area of 12 metres. Â The manipulators can be configured to suit your application and work area. They can be supplied in many configurations

â€‹

All manipulators can be fitted with specifically designed end-effectors tooling to handle limitless Industry applications. Or they can be supplied with a flange onto which you can attach your own end-effector tooling.

â€‹

It is likely that Posilift or one of its suppliers has already solved your problem somewhere in the world.
