

JetStream Non-Ionising Air Knife System

Product Code: AJS-O-XXXX-01

The JetStream Non-Ionising Air Knife System incorporates air knives and a blower, providing a product/surface drying and cooling solution for multiple industries. A high pressure fan unit powers the JetStream, providing air to the unique “Tear Drop” profile, constructed from hard anodised aluminium and stainless steel. The system uses a preset slot in the manifold to direct a precise, high-volume stream of air onto the target. By switching to our Non-Ionising Air Knife instead of compressed air, JetStream not only enhances efficiency but can also reduce operational costs by 70-90%.

The features section below details several advantages the JetStream system offers over other air blow system styles.

The JetStream Non-Ionising Air Knife is ideal for use in the [Food/Beverage](#), Metal and [Automotive](#) industries where static neutralisation is not necessary.

Features & Benefits

Energy Efficient Fan Blown Air	Cost efficient compared to compressed air.
Air Entrainment Deflectors	Minimise the volume of potentially contaminated ambient air that is entrained by the Air Knife and blown onto the target substrate
Optimised Cleaning Performance	Delivers a clean airflow, essential for optimum cleaning performance.
Large Plenum	Ensures even delivery of the airflow along the length of the Air Knife
High Volume and Pressure of Air	Provides both high air pressure and high air volume, key factors in cleaning performance.
Continuous Blade of Air	Delivers a uniform, continuous blade of ionised air for consistent performance.
Easy Maintenance	Unique design characteristics greatly simplifies maintenance procedures.
Material	Constructed from hard anodised aluminium and stainless steel, making it suitable for use in most environments.
Optional Air Feed Locations	Top and end feed Air Knives are available for applications where installation height is restricted (end feed is only available for Air Knives up to 1000mm)

Technical Characteristics

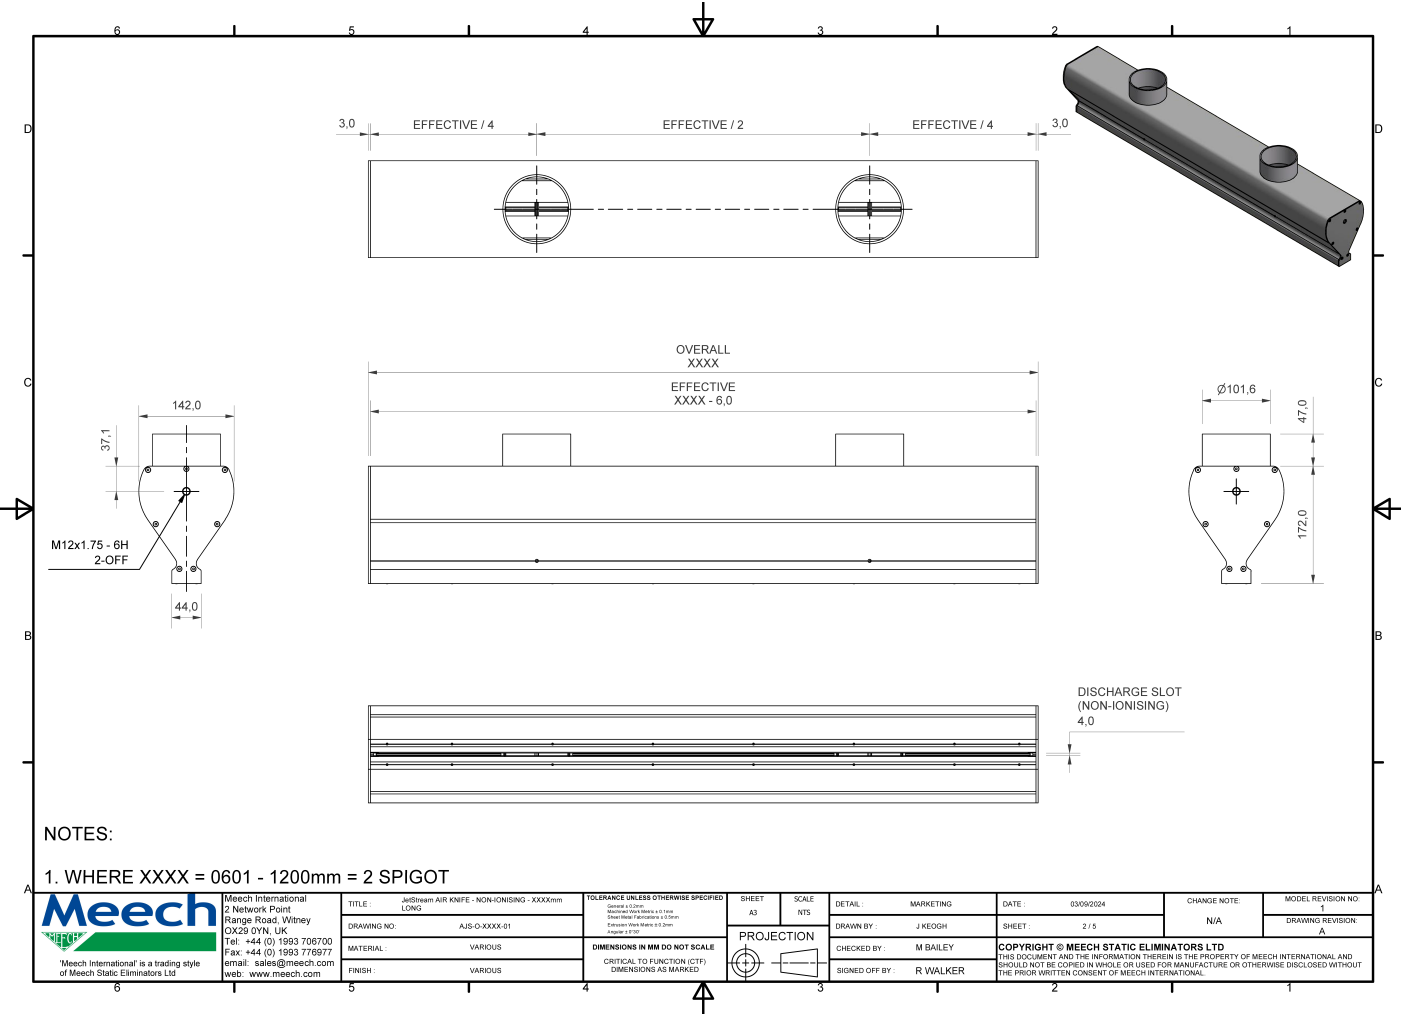

Available Lengths	From 200mm to 3000mm. If a longer Air Knife is required, please contact us.
Optional Silencing/Acoustic Enclosure	Inlet/outlet blower silencer and acoustic enclosure options to control noise levels to as low as 70dBA.
Material	Hard-anodised aluminium main body and stainless steel end plates and fixings, making it suitable for most environments.
Optional Control System	Three different types of control systems available. No control, simple control or PLC. The simple control is supplied with on/off/E-stop buttons to control the unit manually. PLC can be integrated with the line to control the blower, ionisation and profiling.
Optional Filtration	Inlet or inline filtration options, as standard rated to 5 micron.
