

JetStream Ionising Air Knife System

Product Code: AJS-I-XXXX-01

The JetStream Ionising Air Knife System incorporates air knives, a blower and twin ionising bars. A high pressure fan unit powers the JetStream, providing air to the unique “Tear Drop” profile, constructed from hard anodised aluminium and stainless steel. The system uses a preset slot in the manifold to direct a precise, high-volume stream of air onto the target. The ionising bars generate positive and negative ions, which the JetStream blows onto the surface. This powerful ionisation neutralises the surface and removes contamination. By switching to our Ionising Air Knife instead of compressed air, JetStream not only enhances efficiency but can also reduce operational costs by 70-90%. For solutions in hazardous zones, [click here](#).

The features section below details several advantages the JetStream system offers over other air blow system styles.

JetStream Ionising Air Knife benefits industries such as [Food/Beverage](#), Composite Material, Plastic Parts, Sheet Glass, Metal and [Automotive](#).

Features & Benefits

Integral Twin Ionising Bars	Incorporates Meech shockless bars that deliver a balanced, continuous blade of ionised air for totally consistent performance to quickly neutralise static, facilitating easy removal of contamination.
Material	Constructed from hard anodised aluminium and stainless steel, making it suitable for use in most environments.
Energy Efficient Fan Blown Air	Cost efficient compared to compressed air.
Air Entrainment Deflectors	Minimises the volume of potentially contaminated ambient air that is entrained by the Air Knife and blown onto the target substrate.
Optimised Cleaning Performance	Delivers a clean ionised airflow, essential for optimum cleaning performance.
Large Plenum	Ensures even delivery of the airflow along the length of the Air Knife.
High Volume and Pressure of Air	Provides both high air pressure and high air volume, key factors in cleaning performance.
Optional Air Feed Locations	Top and end feed Air Knives are available for applications where installation height is restricted (end feed is only available for Air Knives up to 1000mm).
Continuous Blade of Ionised Air	Delivers a uniform, continuous blade of ionised air for consistent performance.
Optional Silencing/Acoustic Enclosure	Inlet/outlet blower silencer and acoustic enclosure options to control noise levels to as low as 70dBA.
Easy Maintenance	Unique design characteristics greatly simplifies maintenance procedures.

Technical Characteristics

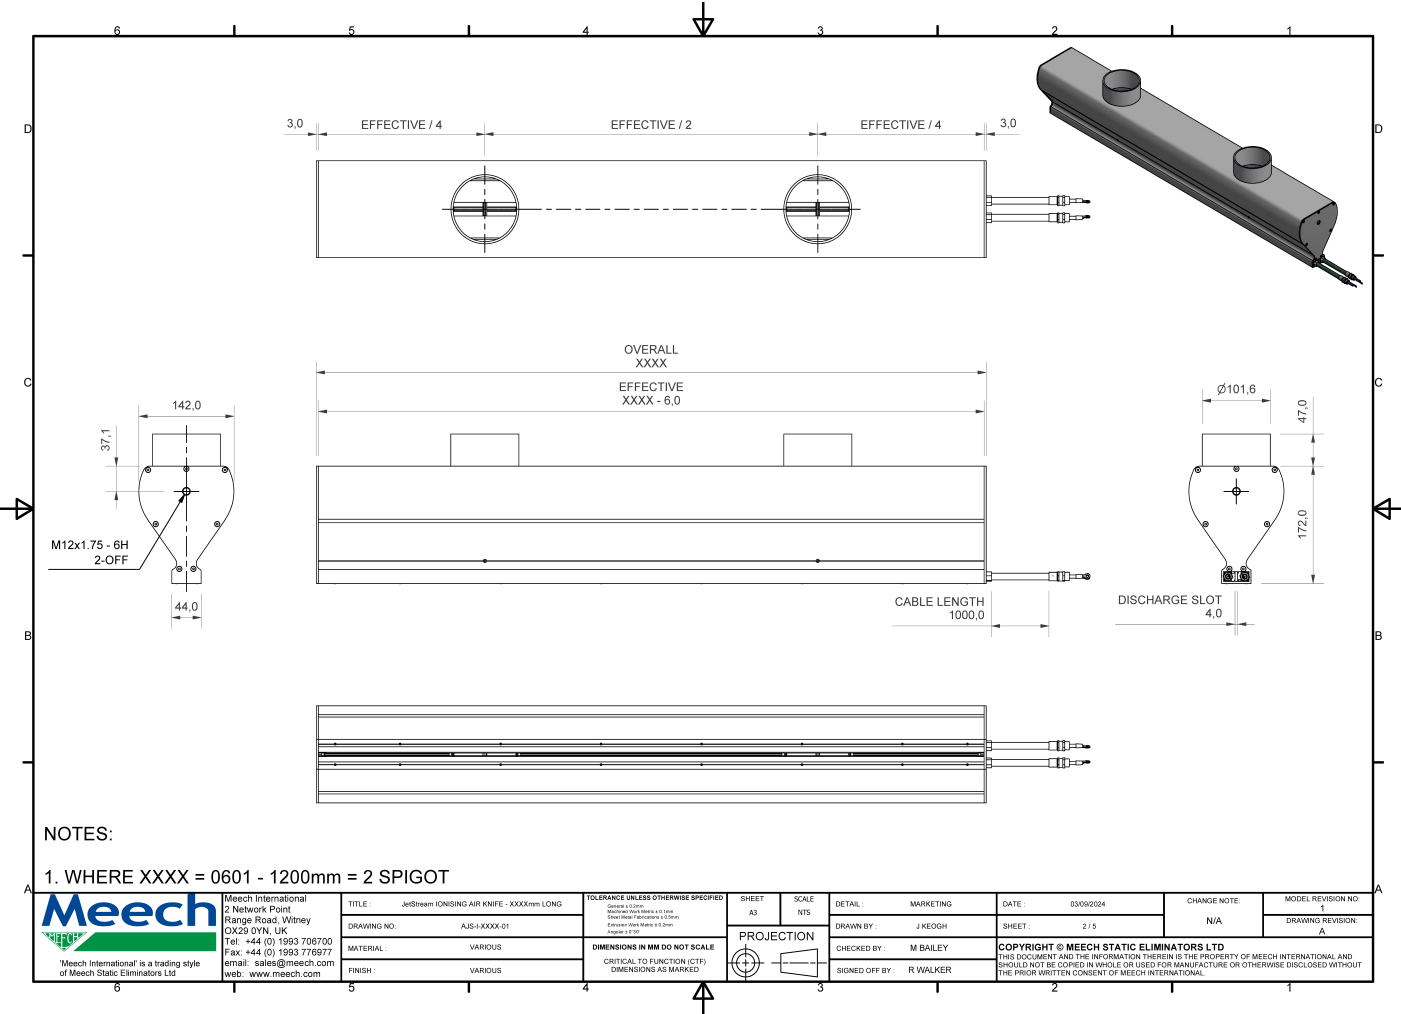

Available Lengths	From 300mm to 3000mm. If a longer Air Knife is required, please contact us.
Suitable Power Unit	A905 to power the ionising bars.
Material	Hard-anodised aluminium main body and stainless steel end plates and fixings.
Optional Filtration	Inlet or inline filtration options, as standard rated to 5 micron.
Ionising Bar Material	Anodised aluminium outer with PVC extruded liner and resin potted components.
Optional Silencing/Acoustic Enclosure	Inlet/outlet blower silencer and acoustic enclosure options to control noise levels to as low as 70dBA.
Emitter Pins	Titanium.
Optional Control System	Three different types of control systems available. No control, simple control or PLC. The simple control is supplied with on/off/E-stop buttons to control the unit manually. PLC can be integrated with the line to control the blower, ionisation and profiling.
