

Air Balancers

Posilift is the distributor of Knight Global Pneumatic / Air Balancers made in the USA. Knight Global Pneumatic/Air Balancers are designed to assist in transferring loads ergonomically using a variety of Up/ Down pendants or Balance "Float" Control Options. Knights have a wide range of Air Balancers and can lift weights up to 1,270 kg. Air Balancers provide superior control over standard air hoists when it comes to locating and positioning loads. The operator can take their hand off the pendant controls, hold the load, and "float" the load into position. The sensation is one of part weightlessness. Air Balancer speeds are greater when compared to a traditional hoist.
